

3M Digital Signage Network Operations Manager

Comprehensive, secure remote monitoring and management of your entire digital signage network infrastructure.

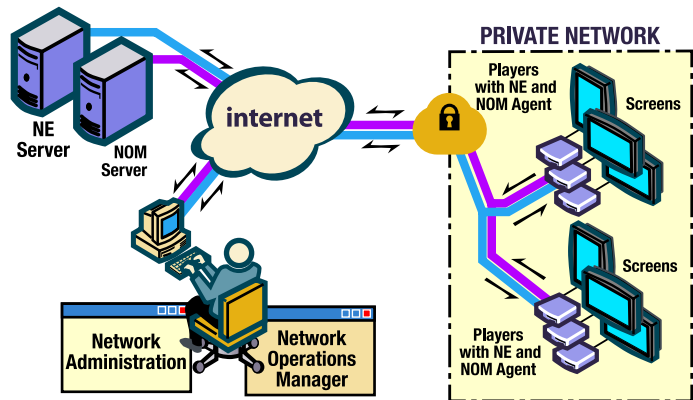

Downtime. With digital signage, downtime anywhere within your digital signage network is a problem that's visible to everyone viewing your displays. A robust, reliable infrastructure is key to the success of your digital signage network.

3M™ Network Operations Manager (NOM) lets you relax, knowing that you're monitoring, managing and proactively maintaining your *entire* network and computing infrastructure - all from your desktop.

NOM allows you to manage, maintain, diagnose and repair hardware and software issues through a secure web-based interface that's accessible from practically anywhere.

Only 3M Network Operations Manager provides direct access to all these advanced features:

- Automated email alerts
- Remote control of any digital signage network PC
- Complete hardware/software inventory management
- Monitoring of all network devices
- Scripting support for virus and patch management
- Complete integrated trouble ticketing
- Customizable reporting engine

Best of all, Network Operations Manager lets you do it all remotely. Whether it's routine tasks or an unplanned event, NOM improves efficiency, minimizes downtime and increases overall IT effectiveness. Support is faster, easier and more cost-effective when problems can be identified and resolved without an on-site technician.

3M Digital Signage – Network Operations Manager
Maximize uptime. Minimize operating costs. Capitalize on the results.
